AMS Mud Augers

Threaded mud augers use national course 5/8” threads and are the most common and least expensive auger. The quick-connect system allows components to connect and disconnect faster. Both augers offer the best durability and allow access to deeper depths. Mud auger bits are designed to sample heavy, wet soil or clay samples. The opening in the auger makes it easier for wet samples to be removed, as well as the wider spaced bits provide easy entrance of sticky soils. The bits are welded to a stainless steel cylinder and topped with a carbon steel ball.

Quick Connect

Quick Connect Mud Augers

Part#	Desciption
300.20	2-1/4” Quick Connect Mud Auger
300.18	3-1/4” Quick Connect Mud Auger
300.17	4” Quick Connect Mud Auger

Threaded
